Acknowledgements	xii

Part 1 Sets, functions, and calculus

1	Sets and functions	3
1.1	Introduction	3
1.2	Sets	4
1.3	Operations on sets	5
1.4	Relations and functions	7
1.5	Combining functions	17
1.6	Summary	23
1.7	Exercises	24
2	Functions and their graphs	26
2.1	Introduction	26
2.2	The straight line: $y = mx + c$	26
2.3	The quadratic function: $y = ax^2 + bx + c$	32
2.4	The function $y = 1/x$	33
2.5	The functions $y = a^x$	33
2.6	Graph sketching using simple transformations	35
2.7	The modulus function, $y = x $ or $y = \text{abs}(x)$	41
2.8	Symmetry of functions and their graphs	42
2.9	Solving inequalities	43
2.10	Using graphs to find an expression for the function from experimental data	50
2.11	Summary	54
2.12	Exercises	55
3	Problem solving and the art of the convincing argument	57
3.1	Introduction	57
3.2	Describing a problem in mathematical language	59
3.3	Propositions and predicates	61
3.4	Operations on propositions and predicates	62
3.5	Equivalence	64
3.6	Implication	67
3.7	Making sweeping statements	70

vi Contents

3.8	Other applications of predicates	72
3.9	Summary	73
3.10	Exercises	74
4	Boolean algebra	76
4.1	Introduction	76
4.2	Algebra	76
4.3	Boolean algebras	77
4.4	Digital circuits	81
4.5	Summary	86
4.6	Exercises	86
5	Trigonometric functions and waves	88
5.1	Introduction	88
5.2	Trigonometric functions and radians	88
5.3	Graphs and important properties	91
5.4	Wave functions of time and distance	97
5.5	Trigonometric identities	103
5.6	Superposition	107
5.7	Inverse trigonometric functions	109
5.8	Solving the trigonometric equations $\sin x = a$, $\cos x = a$, $\tan x = a$	110
5.9	Summary	111
5.10	Exercises	113
6	Differentiation	116
6.1	Introduction	116
6.2	The average rate of change and the gradient of a chord	117
6.3	The derivative function	118
6.4	Some common derivatives	120
6.5	Finding the derivative of combinations of functions	122
6.6	Applications of differentiation	128
6.7	Summary	130
6.9	Exercises	131
7	Integration	132
7.1	Introduction	132
7.2	Integration	132
7.3	Finding integrals	133
7.4	Applications of integration	145
7.5	The definite integral	147
7.6	The mean value and r.m.s. value	155
7.7	Numerical Methods of Integration	156
7.8	Summary	159
7.9	Exercises	160
8	The exponential function	162
8.1	Introduction	162
8.2	Exponential growth and decay	162
8.3	The exponential function $y = e^t$	166
8.4	The hyperbolic functions	173
8.5	More differentiation and integration	180
8.6	Summary	186
8.7	Exercises	187

9	Vectors	188
9.1	Introduction	188
9.2	Vectors and vector quantities	189
9.3	Addition and subtraction of vectors	191
9.4	Magnitude and direction of a 2D vector – polar co-ordinates	192
9.5	Application of vectors to represent waves (phasors)	195
9.6	Multiplication of a vector by a scalar and unit vectors	197
9.7	Basis vectors	198
9.8	Products of vectors	198
9.9	Vector equation of a line	202
9.10	Summary	203
9.12	Exercises	205
10	Complex numbers	206
10.1	Introduction	206
10.2	Phasor rotation by $\pi/2$	206
10.3	Complex numbers and operations	207
10.4	Solution of quadratic equations	212
10.5	Polar form of a complex number	215
10.6	Applications of complex numbers to AC linear circuits	218
10.7	Circular motion	219
10.8	The importance of being exponential	226
10.9	Summary	232
10.10	Exercises	235
11	Maxima and minima and sketching functions	237
11.1	Introduction	237
11.2	Stationary points, local maxima and minima	237
11.3	Graph sketching by analysing the function behaviour	244
11.4	Summary	251
11.5	Exercises	252
12	Sequences and series	254
12.1	Introduction	254
12.2	Sequences and series definitions	254
12.3	Arithmetic progression	259
12.4	Geometric progression	262
12.5	Pascal's triangle and the binomial series	267
12.6	Power series	272
12.7	Limits and convergence	282
12.8	Newton–Raphson method for solving equations	283
12.9	Summary	287
12.10	Exercises	289

Part 2 Systems

13	Systems of linear equations, matrices, and determinants	295
13.1	Introduction	295
13.2	Matrices	295
13.3	Transformations	306
13.4	Systems of equations	314
13.5	Gauss elimination	324
13.6	The inverse and determinant of a 3×3 matrix	330
13.7	Eigenvectors and eigenvalues	335
13.8	Least squares data fitting	338
13.9	Summary	342
13.10	Exercises	343
14	Differential equations and difference equations	346
14.1	Introduction	346
14.2	Modelling simple systems	347
14.3	Ordinary differential equations	352
14.4	Solving first-order LTI systems	358
14.5	Solution of a second-order LTI systems	363
14.6	Solving systems of differential equations	372
14.7	Difference equations	376
14.8	Summary	378
14.9	Exercises	380
15	Laplace and z transforms	382
15.1	Introduction	382
15.2	The Laplace transform – definition	382
15.3	The unit step function and the (impulse) delta function	384
15.4	Laplace transforms of simple functions and properties of the transform	386
15.5	Solving linear differential equations with constant coefficients	394
15.6	Laplace transforms and systems theory	397
15.7	z transforms	403
15.8	Solving linear difference equations with constant coefficients using z transforms	408
15.9	z transforms and systems theory	411
15.10	Summary	414
15.11	Exercises	415
16	Fourier series	418
16.1	Introduction	418
16.2	Periodic Functions	418
16.3	Sine and cosine series	419
16.4	Fourier series of symmetric periodic functions	424
16.5	Amplitude and phase representation of a Fourier series	426
16.6	Fourier series in complex form	428
16.7	Summary	430
16.8	Exercises	431

Part 3 Functions of more than one variable

17	Functions of more than one variable	435
17.1	Introduction	435
17.2	Functions of two variables – surfaces	435
17.3	Partial differentiation	436
17.4	Changing variables – the chain rule	438
17.5	The total derivative along a path	440
17.6	Higher-order partial derivatives	443
17.7	Summary	444
17.8	Exercises	445
18	Vector calculus	446
18.1	Introduction	446
18.2	The gradient of a scalar field	446
18.3	Differentiating vector fields	449
18.4	The scalar line integral	451
18.5	Surface integrals	454
18.6	Summary	456
18.7	Exercises	457

Part 4 Graph and language theory

19	Graph theory	461
19.1	Introduction	461
19.2	Definitions	461
19.3	Matrix representation of a graph	465
19.4	Trees	465
19.5	The shortest path problem	468
19.6	Networks and maximum flow	471
19.7	State transition diagrams	474
19.8	Summary	476
19.9	Exercises	477
20	Language theory	479
20.1	Introduction	479
20.2	Languages and grammars	480
20.3	Derivations and derivation trees	483
20.4	Extended Backus-Naur Form (EBNF)	485
20.5	Extensible markup language (XML)	487
20.6	Summary	489
20.7	Exercises	489

Part 5 Probability and statistics

21	Probability and statistics	493
21.1	Introduction	493
21.2	Population and sample, representation of data, mean, variance and standard deviation	494
21.3	Random systems and probability	501
21.4	Addition law of probability	505
21.5	Repeated trials, outcomes, and probabilities	508
21.6	Repeated trials and probability trees	508

x Contents

21.7	Conditional probability and probability trees	511
21.8	Application of the probability laws to the probability of failure of an electrical circuit	514
21.9	Statistical modelling	516
21.10	The normal distribution	517
21.11	The exponential distribution	521
21.12	The binomial distribution	524
21.13	The Poisson distribution	526
21.14	Summary	528
21.15	Exercises	531
	Answers to exercises	533
	Index	542
